- Small Artificial Plant
- Paper Shredder
- Oscillating Tower Fan (180 degree Pan)
- Standard Wall Camera (Not Covert)
- Outdoor Weatherproof Camera (Not Covert)
- Motion Detector (coming soon)
- Air Ionizer (coming soon)
- Clock Radio (coming soon)

SECURE IP WIRELESS COVERT CAMERAS

How it Works:

Covert Cameras simply plug into standard AC power receptacles. A very small "receiver" plugs into AC receptacle near your PC and is connected via USB cable to your Windows PC. Up to 6 cameras can operated simultaneously from one receiver! Video signal is securely transmitted though your power lines and recorded on your HDD, **eliminating troublesome interference from other RF sources** and keeping your video totally private. Powerful software is included which allows easy set-up for motion-triggered, continuous, or time scheduled recordings. Email and cell phone alerts can also be set up using motion-trigger. Powerful search and play-back tools help you find the video you are looking for fast. A step-by-step installer guide in the software makes set up a snap.

The **SecureIP** Starter Kit includes all the components for a complete single-camera system. With **SecureIP**, you can quickly add a professional-grade digital surveillance system to your home or small business using your Windows PC as the control center.

Easy 4-Step Setup:

We designed SecureIP to allow homeowners, renters, and small business owners to setup an entire system in less than 30 minutes. Using your Windows PC as the control station, you install a professional-grade system with no training, no ladders, no drills, and no new wires. Follow these easy steps to install the starter kit.

1.) Install the Werks Software

From the LukWerks CD you install the powerful Windows® Software, take an online tour, read the User Guide, or review the Software License and Hardware Warranty. During the installation process, the Werks Installer will guide you through each step of the setup.

2.) Connect the USB Receiver

Plug the Luk USB Receiver into a wall outlet and connect to a USB port on your PC. The receiver transfers secure digital video from the **SecureIP** Cameras to the Werks Software on your PC.

3.) Position the SecureIP Camera

Simply plug in the camera at desired viewing angle. That's it!

4.) Register for free Remote Viewing

To access free remote viewing, you create an account at a free designated website. From your account you can register several sites where you have installed a **SecureIP** system – your home, your business, your second home, or even the home of your aging parents. With remote viewing, you have anywhere anytime access to live video from compatible cell phones and Internet browsers
